Prime Numbers

Let's try to factor the number 17. The only way we can do it is like this:

$$\begin{array}{c} \cancel{17} \\ \wedge \\ 1 \cdot 17 \\ \boxed{17 = 1 \cdot 17} \end{array}$$

We still end up with a 17, so you can see that we really didn't break down the 17 into two smaller numbers. In fact, that's impossible to do without using fractions.

A number, like 17, that can only be factored into 1 times itself is called a **prime number**.

5 is also a prime number, since $1 \cdot 5$ is the only way it can be factored using whole numbers.

Can you think of some more prime numbers? (Note: 1 is not considered a prime number. 2 is the smallest prime number.)

Try to factor each number into a product of smaller numbers. If a number is prime, draw a circle around it.

Contracts. 2-4 - 2-6 - 2-7.. https://books.google.com/books/about/Indirect_Visa_in_India_Part_I.html?id=WxYQAQAAQBAJ In this part of a book that covers the legal system of India - including civil law, criminal law, contract law, insurance law, etc. - the author reveals the different legal categories which make up a large part of the legal apparatus of India. She also explains the key implications of these categories in the field of trade contract and business law. With examples and references for each category, she also provides the rationale for the rules which apply to the different types of business as well as some key considerations on interpreting them.
